Preface

Chapter 1

The making of heterodox microeconomics

Economics is the science of the social provisioning process

Heterodox economics

Community of heterodox economists

Heterodox economic theory

Theoretical core

Heterodox microeconomics

Methodology of heterodox economics

Philosophical foundation

Critical realism

Epistemological relativism

Research strategy: method of grounded theory

Pre-existing ideas and concepts

Data, constant comparisons, and theoretical categories

Theoretical sampling and saturation

Structures, causal mechanisms, demi-regularities, and grounded theories

Evaluating grounded theories

Summary of the critical realist-grounded theory approach

Issues of research methods

Mixed research methods and data triangulation

Case study

Analytical statistics

Schemas, modeling, and mathematics

Historical character of heterodox economic theories

The making of heterodox microeconomic theory

Chapter 2

Structure, agency, and modeling the economy

The social provisioning process

Representing and modeling the productive structure of the economy and the surplus

Circular production

Circular production, non-produced inputs, and scarcity

Fixed investment goods, resource reserves, and the surplus

Social provisioning as a going plant

Representing the relationship between the social surplus and income

Classes, state, and state money

Government expenditures, state money, and the financial sector

Profits, incomes, and the social surplus

Social provisioning as a going economy

Agency, acting persons, organizations, and institutions

The acting person

The business enterprise

The state

The household

Market governance organizations

Trade unions

Agency, acting persons, and core decisions

Modeling the economy as a whole

Chapter 3

The business enterprise: structures

Organizational structure of the business enterprise

Decision-making structure and the acting enterprise

Motivation

Decision-making structure

Management accounting procedures

Structure of production and costs

Production, technology, plants, and direct costs

Shop technique of production and shop expenses

Enterprise technique of production and enterprise expenses

Structure of production and costs of a product line

The heterodox theory of production and costs

Chapter 4

The business enterprise: agency and causal mechanisms

Costing and pricing

Costing-oriented pricing

Mark-up-oriented pricing

Going concern prices

- Pricing and the profit mark-up
- Market governance and market prices

- Investment

 - Long-range planning
 - Investment decisions

Chapter 5

Markets and demand for the social product

- Market, industry, and the social provisioning process

 - Market as an institution for social provisioning

 - Market: defined and delineated

 - Product types and characteristics of markets

 - Market and industry

- Demand for the social product

 - Acting household and consumption demand

- Structure of market demand and the market price

 - Relationship between market price and market sales

- Going enterprise, sequential production, and the market price

- Competition, market power, and the going market price

 - Market power and price instability

 - Price instability and the going enterprise

Chapter 6

Competition, the market price, and market governance

- Heterodox approach to market competition and market governance

- Competition and market concentration

- Basis for managed market competition

- Market governance: controlling instability through regulating markets

- Private market governance and the market price: trade associations

 - Legal form

 - Constitution and purpose

 - Organization and management

 - General activities

 - Representational activities

 - Trading and commercial services

 - Regulating market activities

- Private market governance and the market price: price leadership

 - The dominant enterprise defined and identified

Determining the market price

The dominant enterprise and the market price

Appearance and stability of the dominant enterprise

The evolution of the dominant enterprise: costs

The evolution of the dominant enterprise: competitive strategy

Public market governance and the market price: government regulations

Market competition and the control of the social provisioning process

Chapter 7

Microeconomics and the social provisioning process

Social provisioning and social surplus

Pricing model and theory of prices

Output-employment model and the social surplus

The going economy and its theoretical core

Price and output-employment decisions

Prices and the going business enterprise

Social surplus, the state, and wages and profits

Social surplus and social provisioning

Theory of value and heterodox microeconomics

Chapter 8

The role of microeconomics in heterodox economics: a view of a heterodox micro theorist

Introduction

The economy as a whole, as a conceptual and theoretical foundation

Effective demand, income distribution, and the social provisioning process

Microeconomics in heterodox economics

Heterodox microeconomic topics and future research

Appendix 1 Heterodox Microeconomics Course Syllabus

Appendix 2 Narrative-Qualitative-Analytical Problem Sets
